

Handycoat creates a seamless finish at Manchester Royal Exchange

Country	United Kingdom
City	Manchester
Project Name	Manchester Royal Exchange
Date Completed	June 2017
Product	Handycoat EZ-Roll

Terraco were approached by Chris Jones from CP Decorators of Bolton to provide a solution for the plastering requirements in the stairwells at The Manchester Royal Exchange Building. This grade 2 listed former cotton trade building in the centre of Manchester has undergone a complete renovation and has been converted into ultra-modern offices and shops.

Chris said "Traditional dry powder plaster would not be suitable due to restricted access. The existing surface, old wallpaper would not be practical to remove due to limited access and a lack of water, it would also greatly increase the time to complete the project and increase the costs if the wallpaper had to be removed!"

Terraco were able to offer the ideal solution, **Handycoat EZ-Roll**.

As one of the Handycoat range products, Handycoat EZ-Roll is a ready-mixed, roller applied, plaster with no product wastage! The Handycoat EZ-Roll was simply rolled onto the existing surface, then smoothed using traditional towel/spatula methods, leaving a smooth white finish that needed little if any sanding, no primers and was ready for decoration.

Janis & David, the contractors on site said "Handycoat EZ-Roll has saved them so much time on site as the product could be applied directly onto the existing surface, without the need to first strip off the wallpaper. Handycoat EZ-Roll is very easy to use and leaves a great finish that is easy to sand and decorate, using Handycoat EZ-Roll has made the job a lot easier and faster to complete and made the project a pleasure to work on."
