

Resin Bound Permeable Surfacing Recommended Specification for Terrabase Rustic

Permeable Driveway (SUDS)

Typical Base Build Up

Surface Course

Hand applied and trowelled to a rustic finish by Addagrip approved installers.

Terrabase Addagrid

Terrabase Geofabric

Sub-base laid by others in well compacted layers to a minimum fall of 1.5%

Sub-grade

NOTE: A suitable steel, wood, brick, stone or aluminium edging should be provided to ensure a neat edge detail but depending on project requirements the Geofabric can be used as an edging. The maximum tolerance of the base should not exceed 3mm under a 1m straight edge. If existing sub-grade is silty, it may be necessary to stabilise it or partially replace it with sub base/granular capping layer. If there is danger of ponding, the sub base should be laid to falls. Total sub base depth will be dictated by loading and attenuation requirements.
